

Can I install FotoFusion on more than one computer?

The short answer: yes - providing you are the sole user. We understand that you may use a desktop at work, a laptop at home, a netbook in the field. A second installation is fine, providing it's for your own personal convenience.

Please note: If your license of FotoFusion is being used simultaneously by multiple users, for instance in a studio setting, you are required to **purchase an additional license for each user of the software**. This is detailed in our *End User License Agreement (EULA)*.
